Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims

- 1. (Currently Amended) An airbag module having a gas generator, in particular having a tubular gas generator, which has a plurality of outflow openings distributed over its circumference for the gases produced after it has been triggered, characterized in that wherein at least one of the outflow openings (3, 4, 14-19) in the gas generator (2) can be closed during the installation or after the installation in the airbag module, and in that the gas generator (2) is fastened in a module housing (1, 20) which has a closure element (5, 22-25) in the region of each opening (4, 14, 18, 19) to be closed of the gas generator (13).
- 2. (Currently Amended) The airbag module as claimed in claim 1, eharacterized in that—wherein for each outflow opening (3, 4, 14-19) to be closed, a closure element (5, 22-25) engaging in the latter is provided.
- 3. (Currently Amended) The airbag module as claimed in claim 2, characterized in that wherein the closure element (5, 22-25) has the diameter of the outflow openings (3, 4, 14-19).
- 4. (Currently Amended) The airbag module as claimed in <u>claim 1at least one of claims</u>

 1 to 3, <u>characterized in that wherein</u> for each outflow opening (3, 4, 14-19) to be closed, a separate closure stopper (11) is provided as the closure element.
- 5. (Currently Amended) The airbag module as claimed in claim 1 at least one of the preceding claims, characterized in that wherein a tubular gas generator (2) is provided as the gas generator, the module housing (1, 20) bears tightly against the gas generator (2, 13) in the region of each of the outflow openings (4, 14, 18, 19) to be closed of the same.

- 6. (Currently Amended) The airbag module as claimed in claim 1 at least one of the preceding claims, characterized in that wherein the module housing (1, 20) has, on each opening (4, 14, 18, 19) to be closed, a cylindrical lug as the closure element (5, 22, 24, 25).
- 7. (Currently Amended) The airbag module as claimed in claim 1 at least one of the preceding claims, characterized in that wherein the module housing (1) has, on each opening (4) to be closed, a bead (9) as the closure element.
- 8. (Currently Amended) The airbag module as claimed in <u>claim 1</u> at least one of the preceding claims, characterized in that wherein the module housing (1, 20) has, in the region of the gas generator (2, 13), the shape of a half shell (1a-c, 20a) matched to the generator housing, and in that a retaining plate (6, 26) is provided for fixing the gas generator (2, 13) in the module housing (1, 20).
- 9. (Currently Amended) The airbag module as claimed in claim 8, characterized in that wherein the module housing (1, 20), when a cylindrical tubular gas generator (2, 13) is used, is designed as a cylindrical half shell (1a-e, 20a) which is assigned a cylindrical half shell as the retaining plate (6, 26).
- 10. (Currently Amended) The airbag module as claimed in claim 8 or 9, characterized in that wherein the retaining plate (6, 26) has beads (9) directed toward the gas generator (2, 13).
- 11. (Currently Amended) The airbag module as claimed in <u>claim 1</u> at least one of <u>claims 8 to 10</u>, <u>characterized in that wherein</u> the retaining plate (26) has at least one closure element (23).
- 12. (Currently Amended) The airbag module as claimed in claim 11, characterized in that wherein a bead (23) is provided in the retaining plate (26) as the closure element.
